

ESI to represent TECMAN "PEDASTAL BOOM SYSTEMS" in New England

THE WORLDWIDE LEADER IN PEDASTAL BOOM SYSTEMS ARE HERE IN AMERICA !

BOCA RATON, FL - - TECMAN USA is pleased to announce that ESI will be distributing their line of pedestal boom systems in New England. TECMAN, the industry leader throughout Europe and the World has entered the North American marketplace with a rather unique pedestal boom system that will eliminate conventional boom technology used in the USA, namely the center pin technology. Not only is the TECMAN system heavy duty but it requires considerably less structure and inertia mass to hold it up. Center-pin design with a heavy overhung arrangement requires not only a stout structure but plenty of concrete to prevent it from tipping over. TECMAN systems center of gravity is the same concept as a hydraulic excavator and can be easily mounted on TECMAN's unique post design structure, on portable chassis's , track crushers, and the most unique designed ever contemplated. Ask ESI for a TECMAN brochure and further information.
